

# Climate Change Projections for Water Resources of Turkey

**Presenter: Furkan Yunus Emre CEVAHİR**  
**Flood and Drought Management Department**  
**General Directorate of Water Management**  
**TR Ministry of Agriculture and Forestry**

# Content

- Climate Change Impacts on Water Resources of Turkey
- Climate Change Impacts on Snowmelt and Streamflows
- ClimaHydro Database
- Turkish National Water Information System «USBS»

# Climate Change Studies for Water Resources

- Studies to determine the effect of climate change on water resources

2020-2021

**Climate  
Change  
Impact on  
Water  
Resources  
Project**

**Project for  
Determining  
the Effects of  
Climate  
Change on  
Snow Melts  
and Flows**

**Adaptation  
to Climate  
Change in  
Water  
Resources**

# Climate Change Impacts on Water Resources

We determined the impacts and many more:

## Objective of the Project

- Determining the impact of climate change on surface and groundwater
- Determining river basin scale adaptation measures for our country

## IklimSu Database

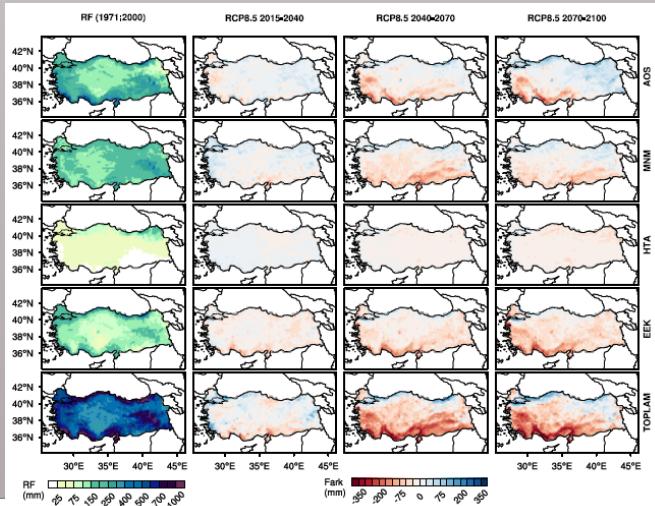

<http://iklim.tarimorman.gov.tr>

# Climate Projections

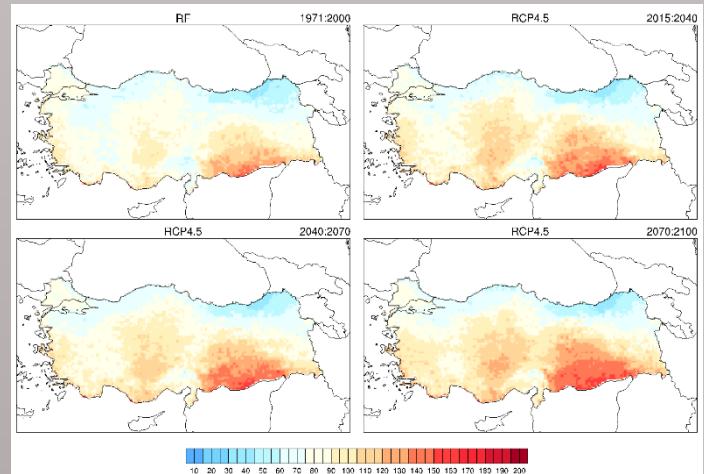

1. Average temperature
2. Maximum temperature
3. Minimum temperature
4. Total precipitation
5. Snow cover
6. Relative humidity
7. Pressure
8. Total radiation

- 8 parameters
- 10 and 30 yearly average
- Map and graphics

Days with Frost	Daily Temperature Range
Summer Days 25	Max. 5-day precipitation
Cool Cold Nights	Max. 1-day precipitation
Cool Cold Days	Max. 1-day precipitation (20 mm)
Hot Nights	Consecutive Dry Days (25 mm)
Hot Nights	Consecutive Wet Days
Summer Days 35	Consecutive Dry Days
Heat Wave	Consecutive Wet Days
Cold Wave	

- 17 indices
- 30 years average
- Map and graphics

# Climate Projections

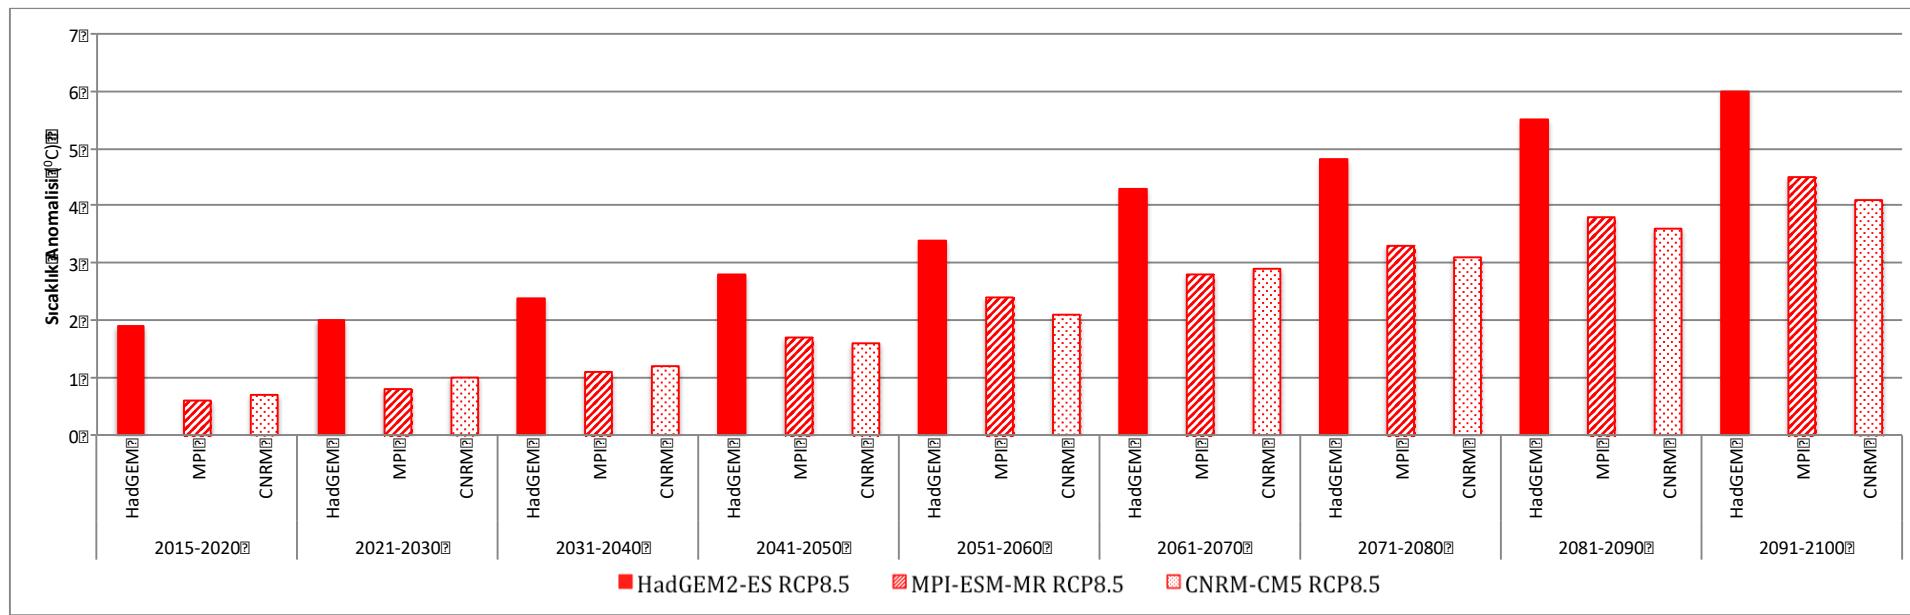

## Temperature

Temperature is increasing according to all models and both scenarios.

### Temperature Projections

2°C - 3.5°C (RCP4.5)

4.1°C - 6 °C (RCP8.5)

# Climate Projections

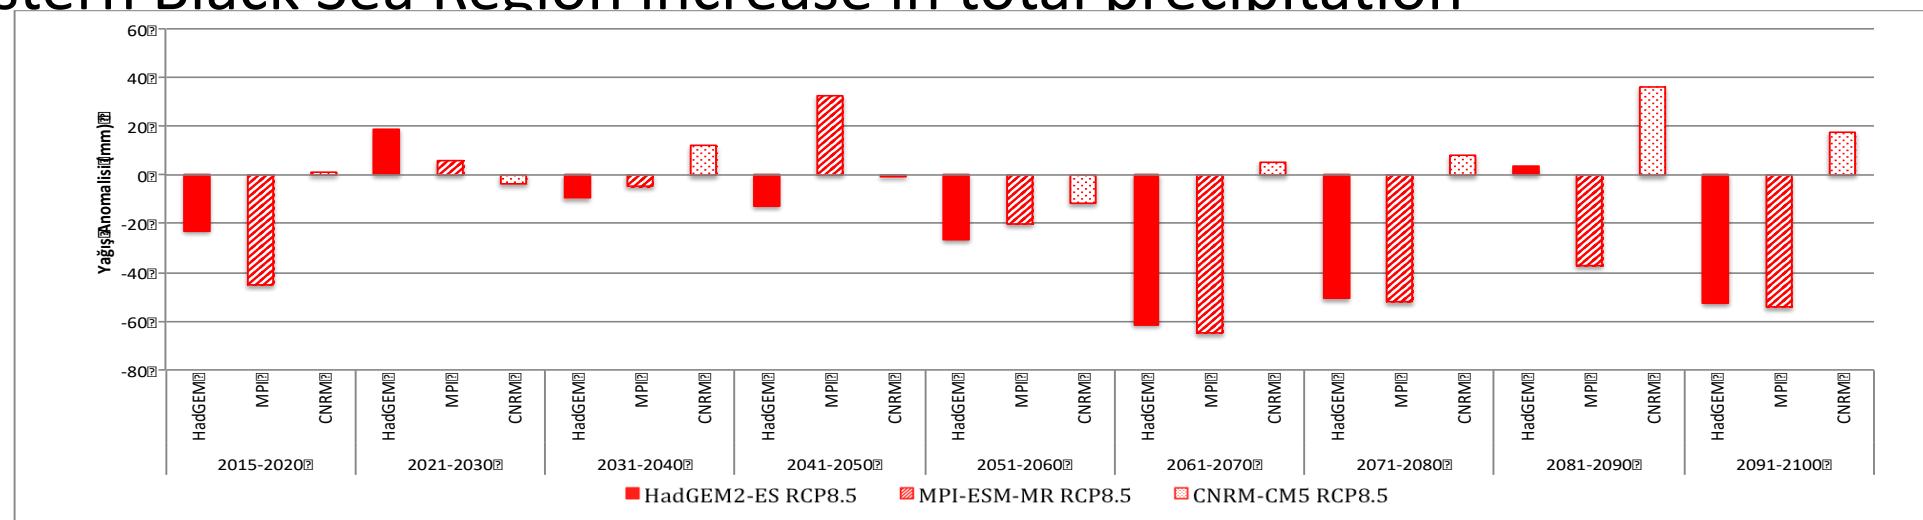

## Precipitation

Total precipitation will decrease over all Turkey according to both scenarios.

Amount of decrease in some regions reaches 250-300 mm's (average is 60 mm)

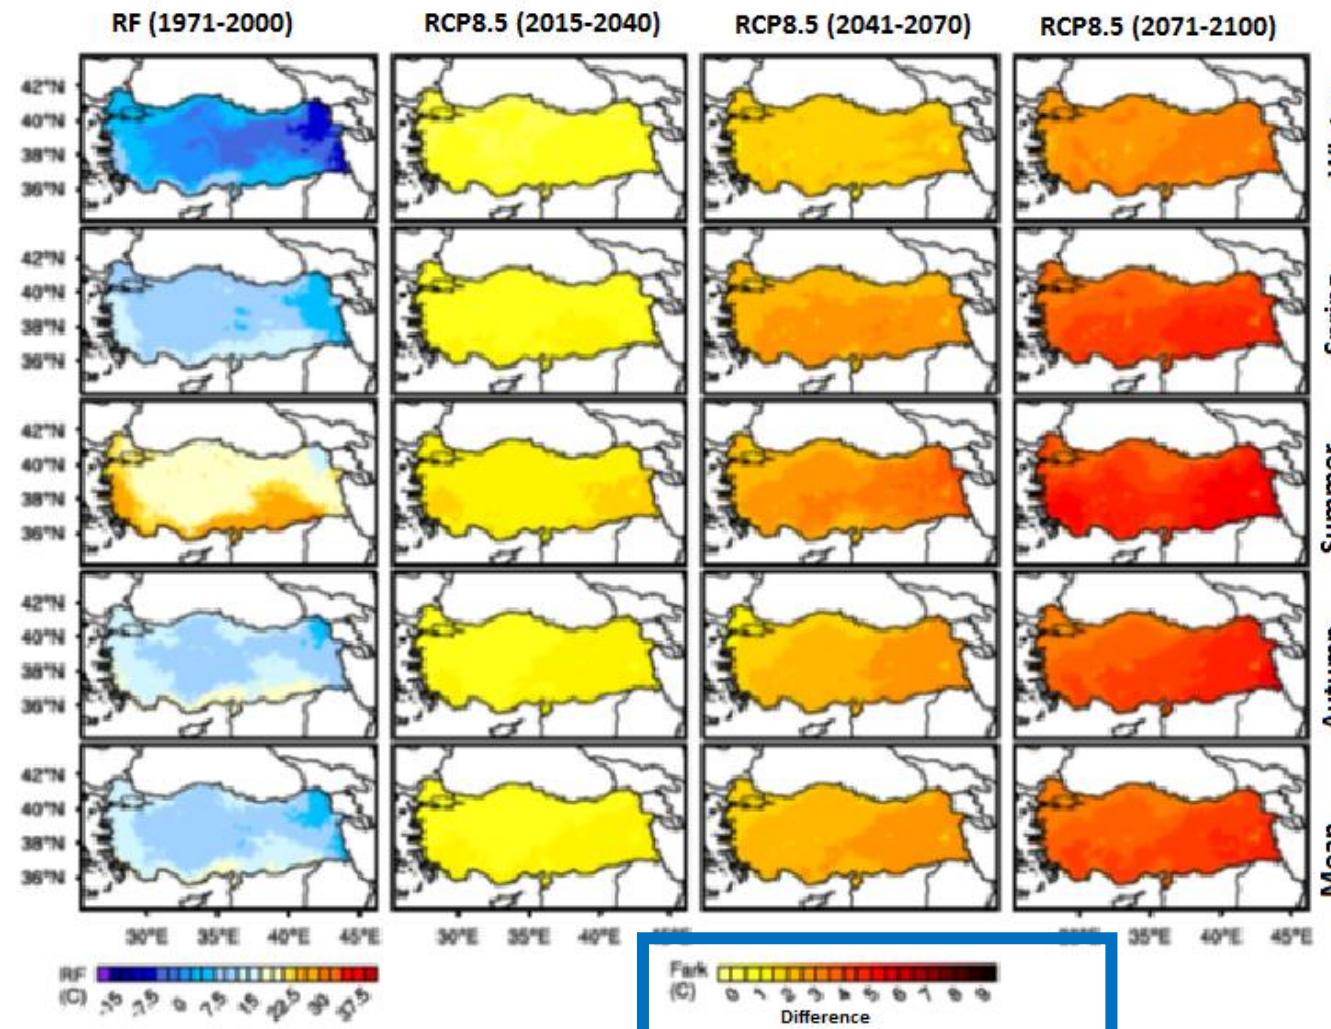

Especially Aegean Region coasts and Southern Eastern and Eastern Anatolia,  
significant decrease in total precipitation

Eastern Black Sea Region increase in total precipitation

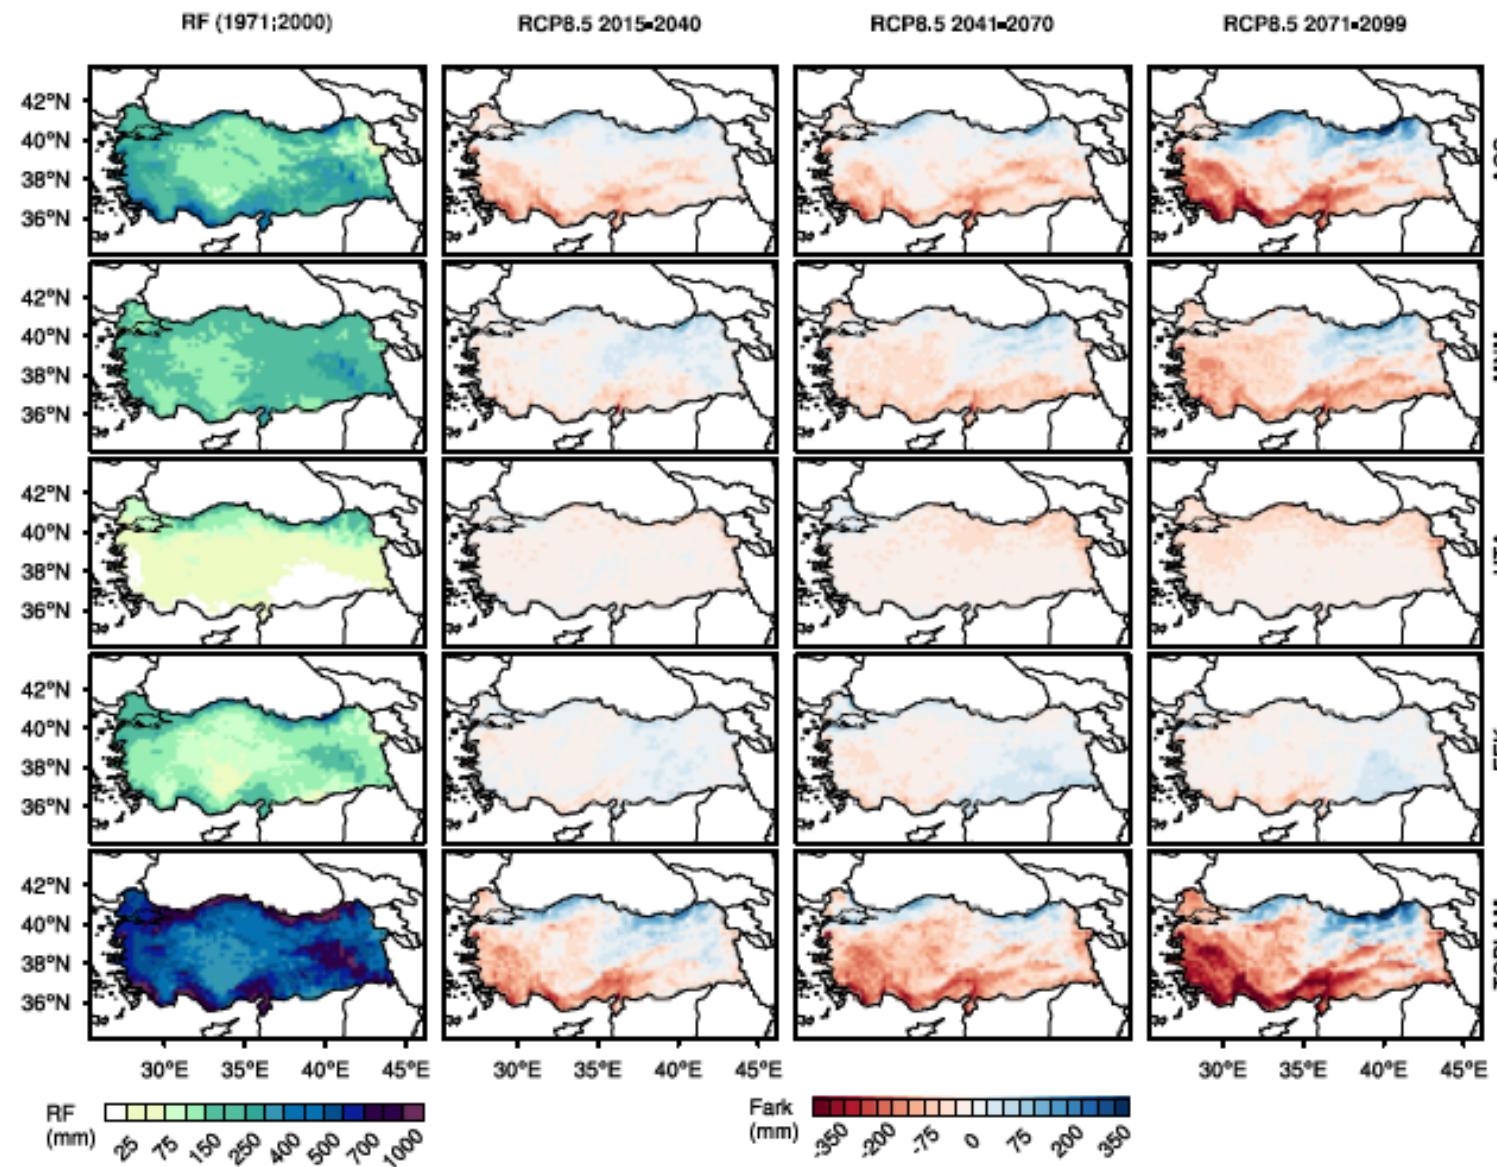

# MPI Model\_Mean Temperature

## RF ve RCP8.5 Model Results (2015-2100)

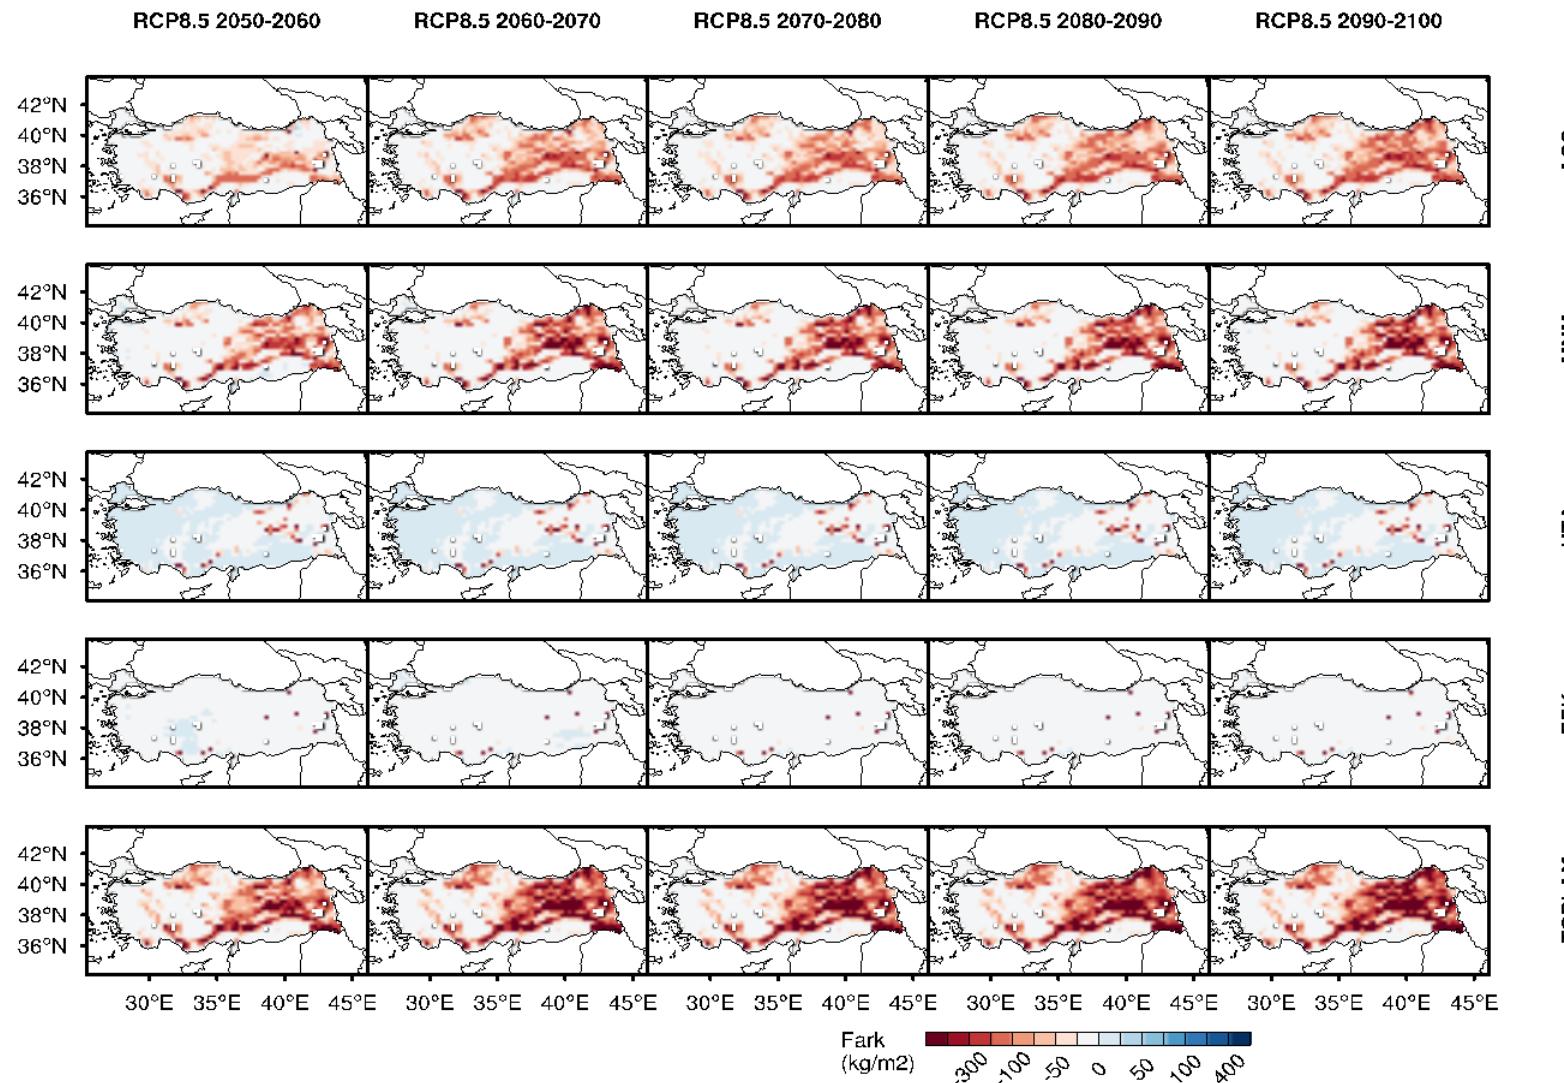

# MPI Model\_Total Precipitation

## RF ve RCP8.5 Results (2015-2100)

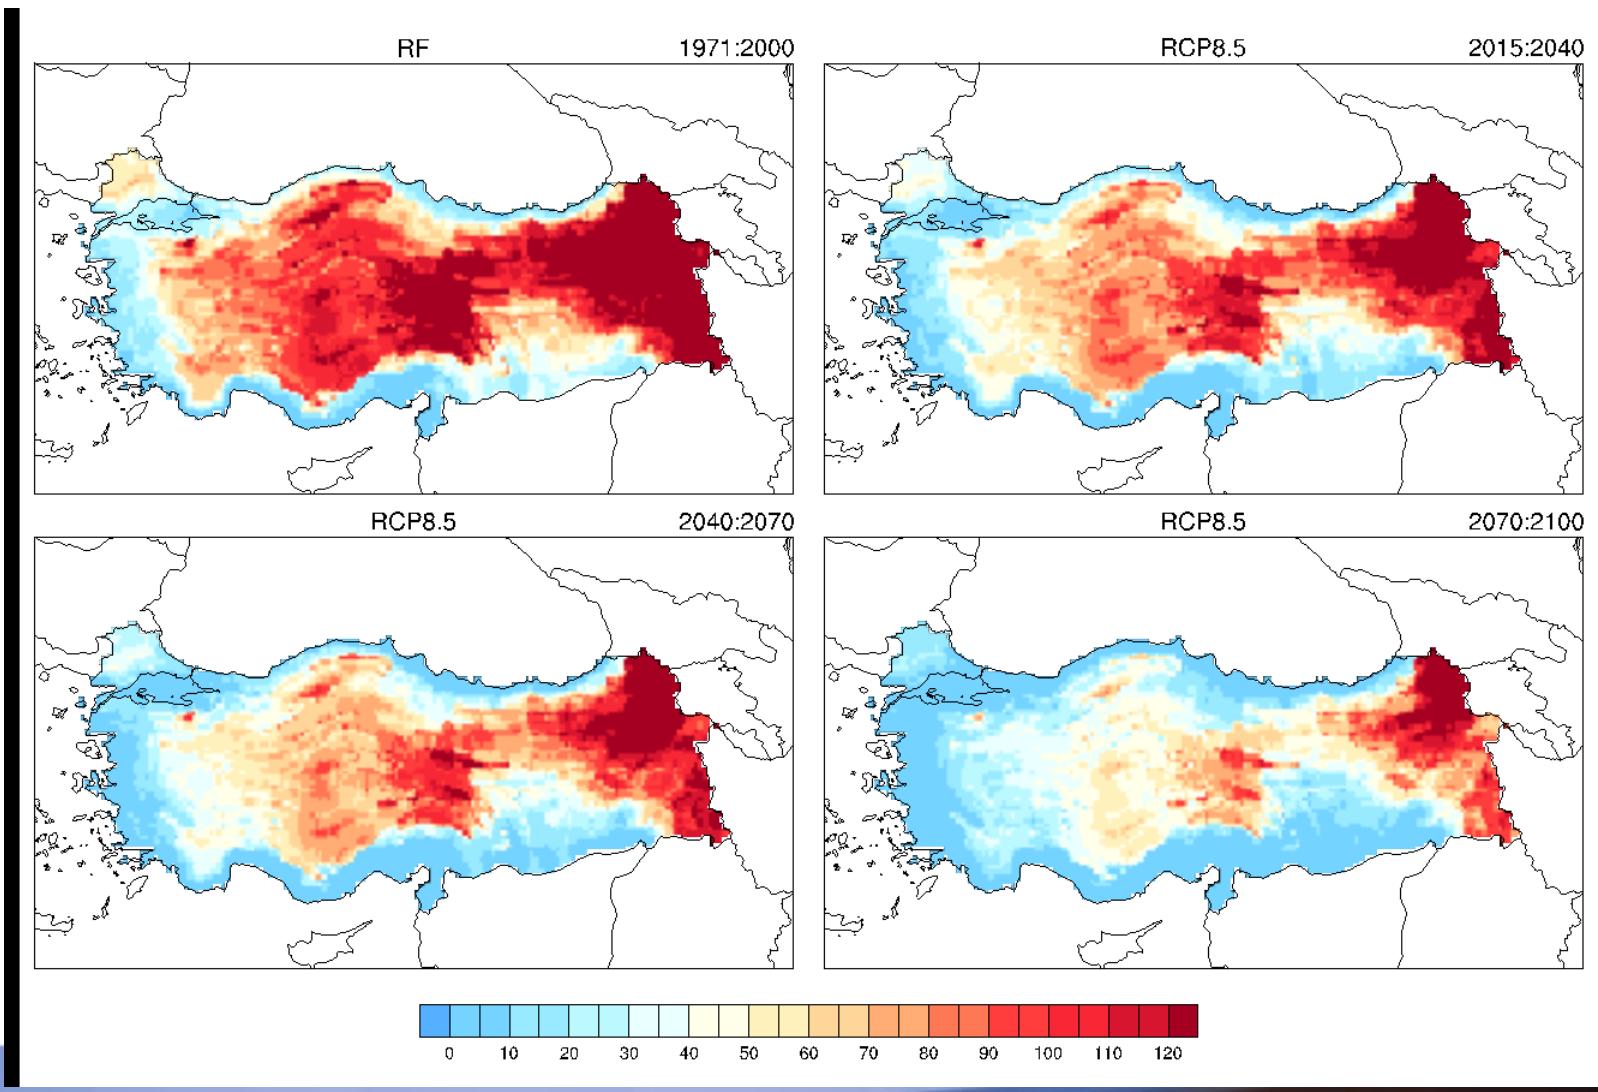

# HadGEM2-ES Snow Cover

## RF ve RCP8.5 Results (2050-2100)

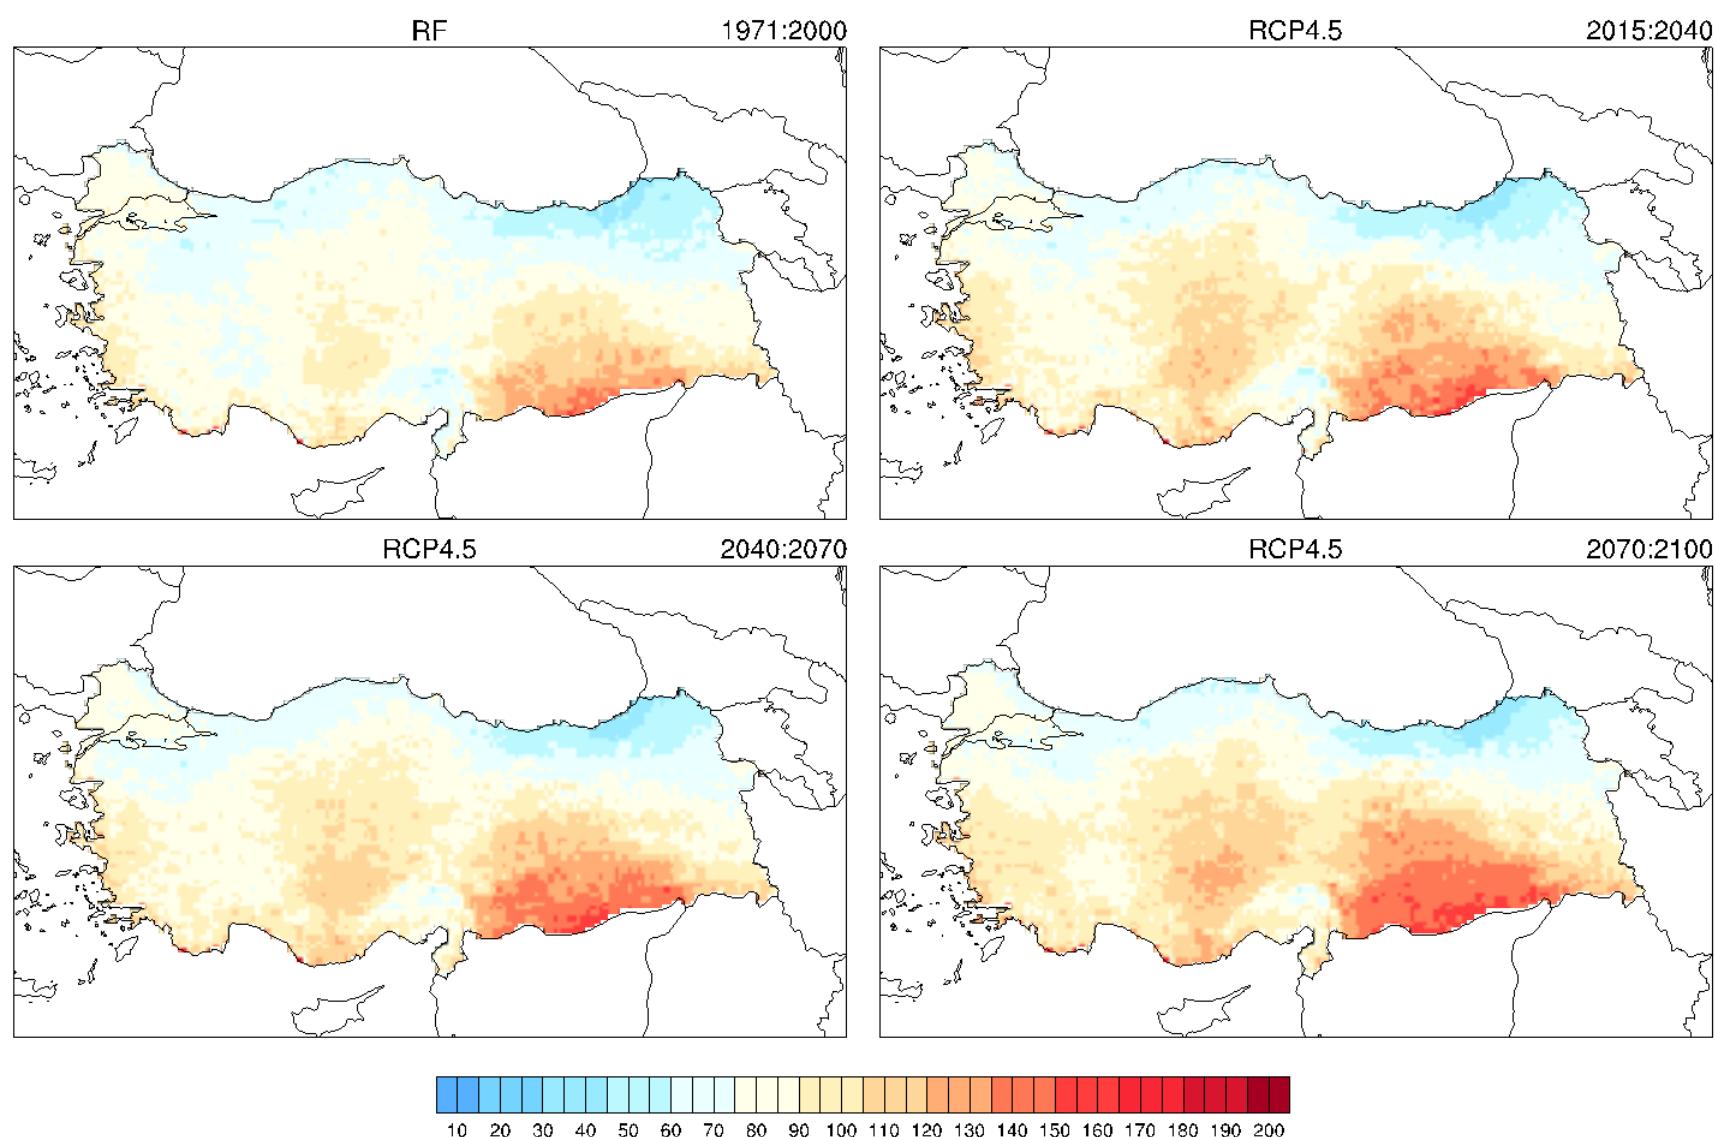

# HadGEM2-ES FD0 Climate Index

## RF ve RCP8.5 Number of Frost Days /30 years

# HadGEM2-ES Model- CDD Climate Index

## RF ve RCP4.5 Number of Consecutive Dry Days/30 years

# Climate Change Impact on Snowmelt and Streamflow

One plot basin was selected in a snow dominated region in the southeastern region in Turkey.

We analyzed:

- Snow mass in snow-covered areas and altitude relationship
- Snow-water equivalent
- Snow cover extend

We found two important outcome:

- Snowcover areas significantly decrease by up to fifty precent.
- Water availability shifts to early spring months away from summer months when water demand is maximum.

# ClimaHydro Database and Website

All data produced which reveal

**Climatic**

**Hydrological projections**

is stored in **ClimaHydro Database** and those data and outputs will be able to be interrogated by means of the website.

# National Water Information System

TRNWIS HAS BEEN ESTABLISHED

Turkish National Water Information System is now on air...
